

Digital PTT - Current Operational Flow

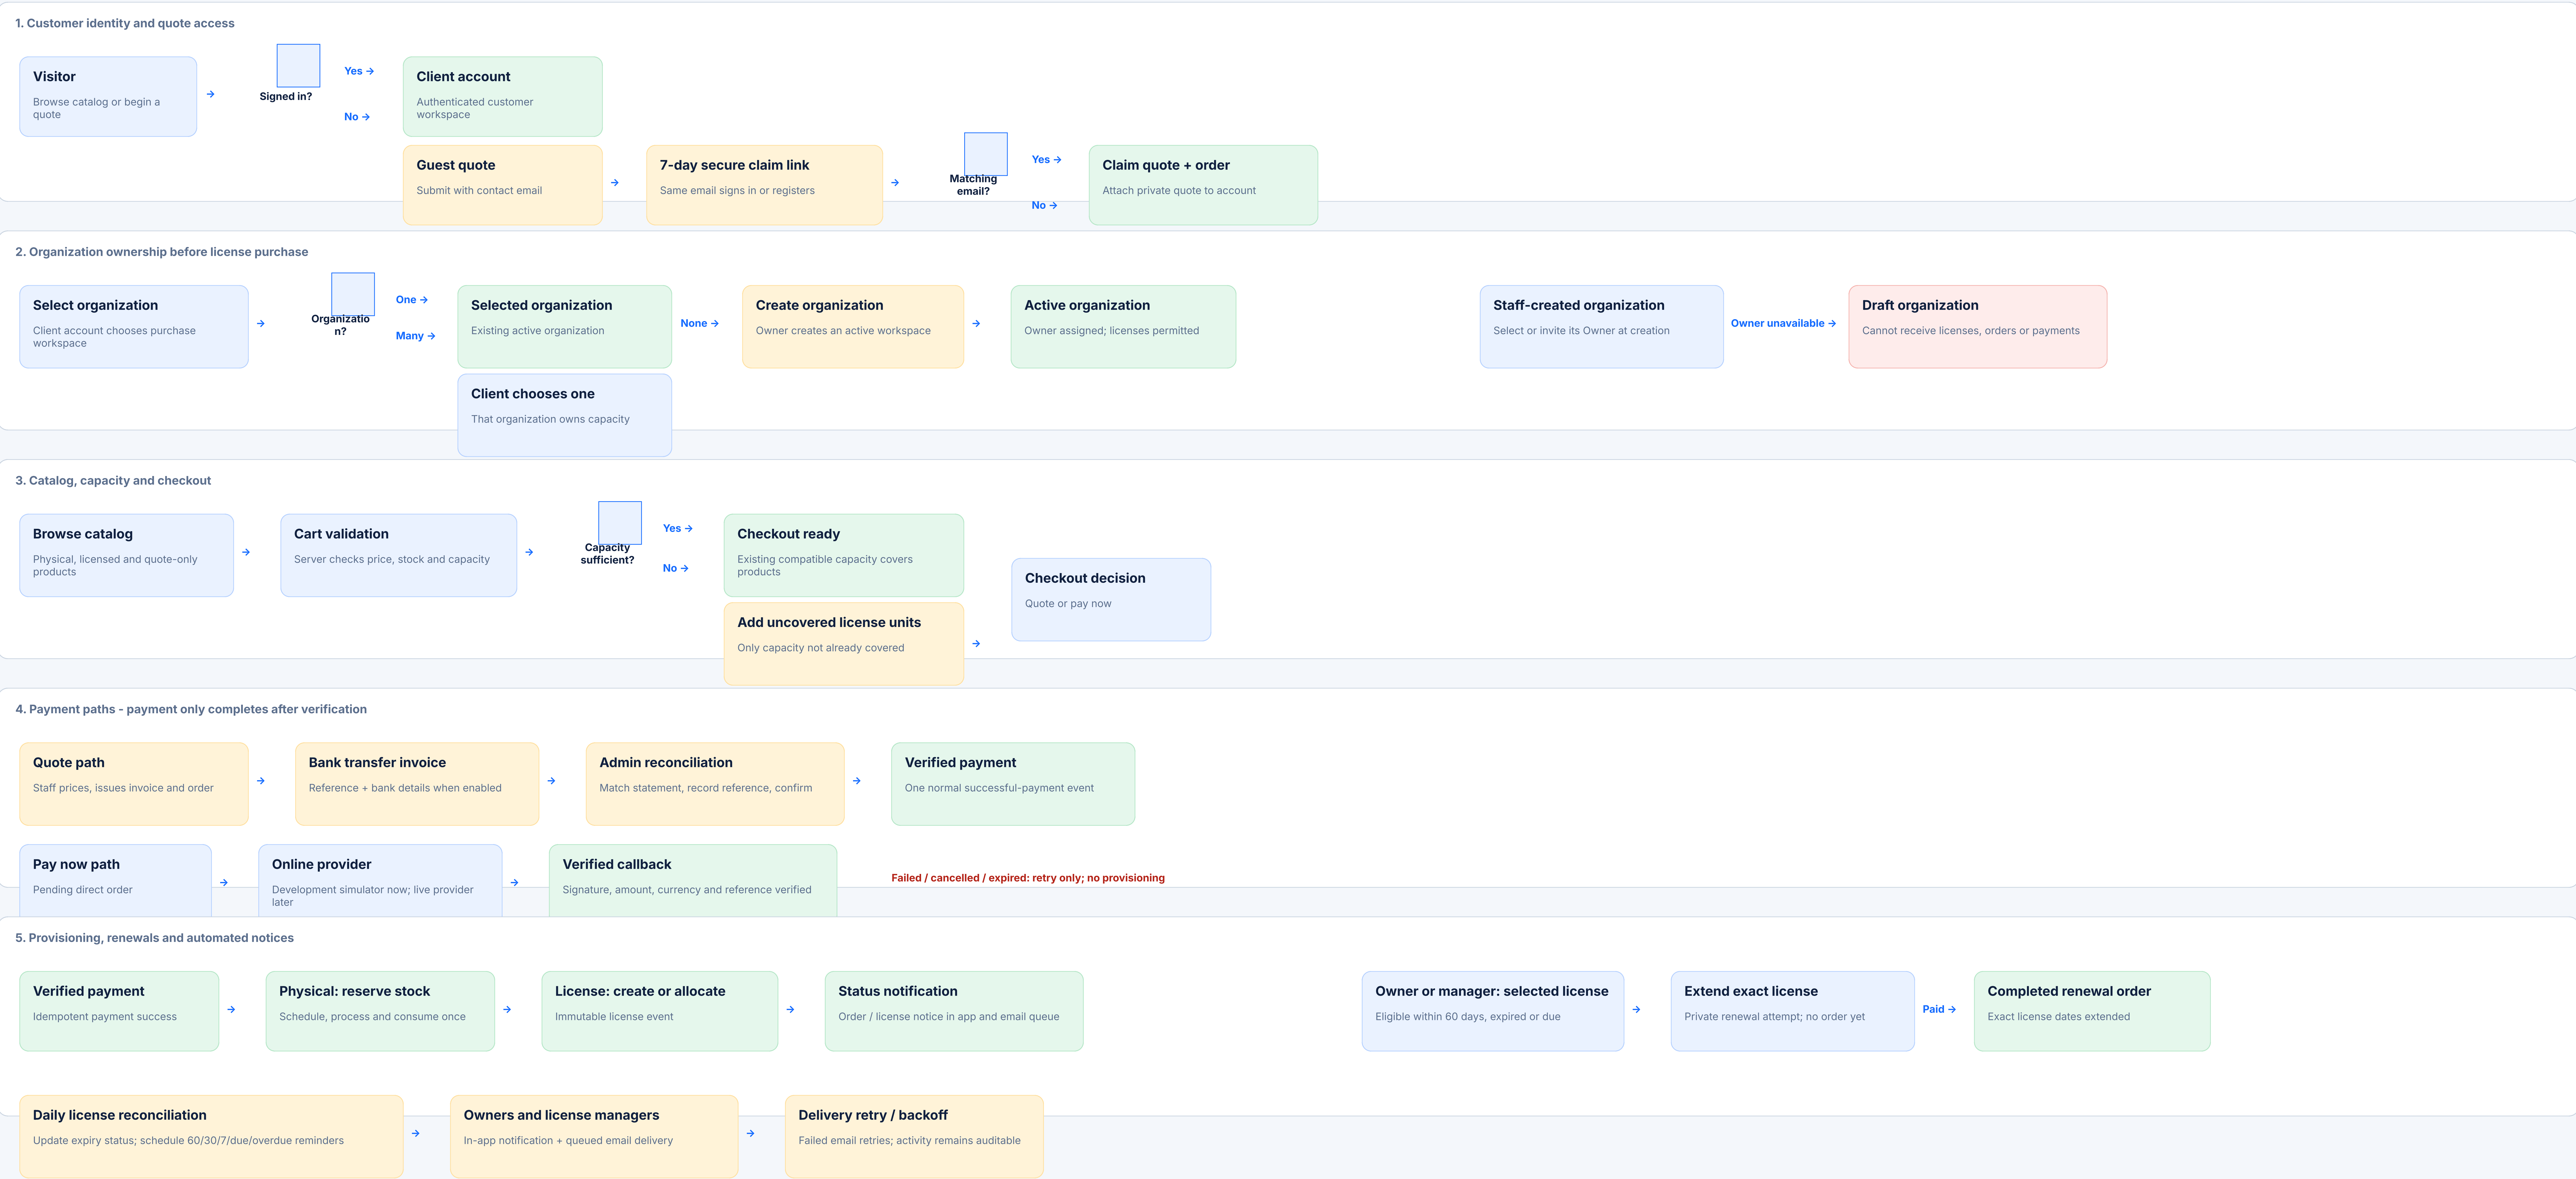

Current product behavior and operational policy | Updated 27 Aug 2026

A selected organization owns the license capacity. Bank transfer is the Version 1 invoice path; online provider checkout is prepared as a parallel future path.

Customer and organization
Account, ownership and purchase context

Payment and fulfillment
Verified payment unlocks provisioning

Automation
Daily reconciliation, notices and email

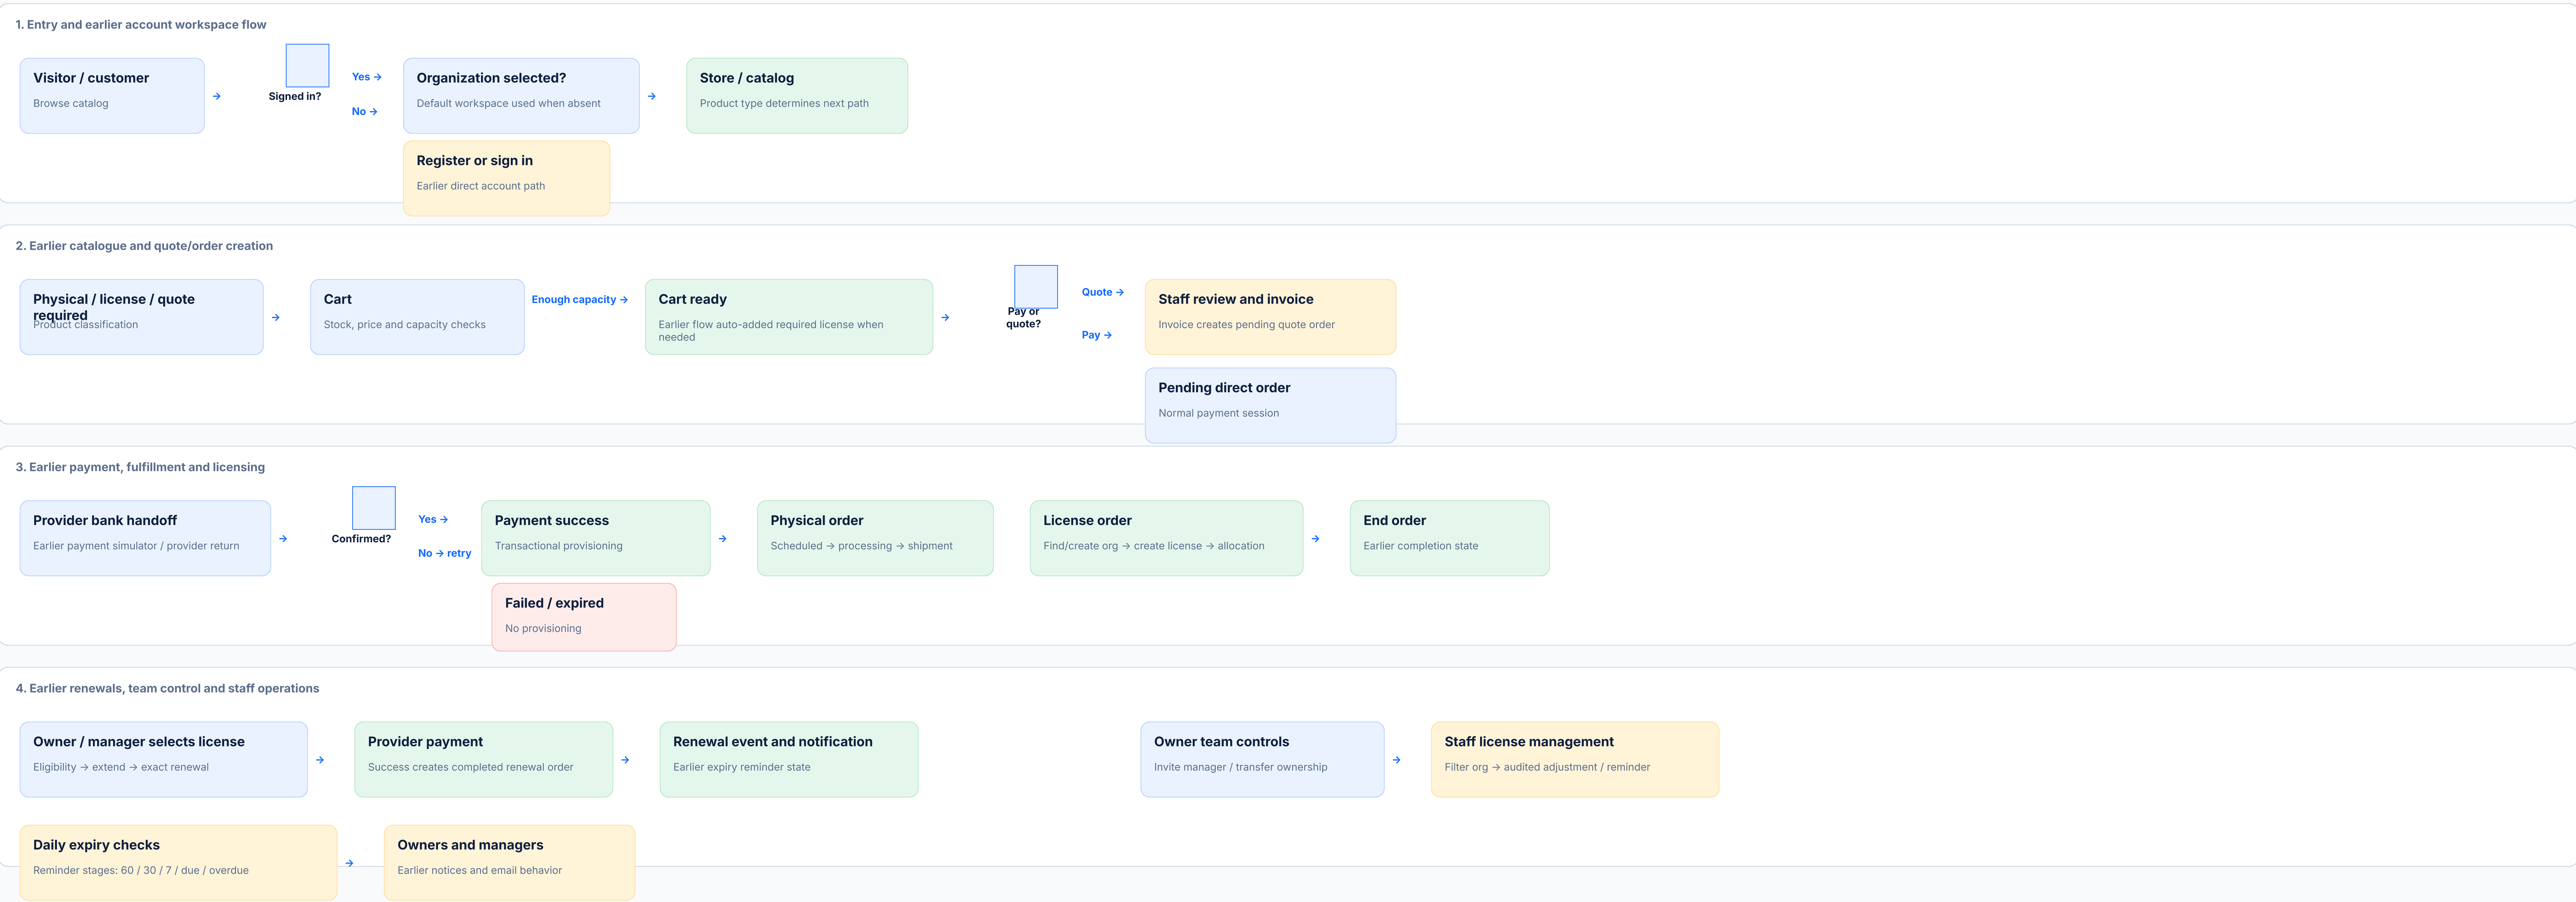

Key control: a new license or a renewal is never activated simply because a checkout page opens. Only verified payment completion may provision it.

Digital PTT - Historical Detailed Flow

Reference only - earlier 24 Aug 2026 workflow. Use the Current Operational Flow above for implementation decisions.

Historical reference

Earlier design state, retained for traceability

Historical note: this version predates the current secure guest-quote claim, explicit organization selection, bank-transfer reconciliation controls, and verified-payment-only provisioning policy.
